

Open Position

QA Software Engineer

Position: Quality Assurance Software Engineer, WebRTC

Reference 2019/Feb/QA-WebRTC-engineer

Description

You will join our existing QA team and your responsibility will consist of ensuring that new features are delivered defect-free and in a timely manner. In order to fulfil and exceed quality requirements and guarantee functional non-regression, you will help developing device-automated as well as manual scripts based on integrated build systems.

Responsibilities:

- Derive test plan requirements, test cases, test scripts and product acceptance criteria from product requirements documents
- Analyse test results and report bugs into our Jira platform, and suggest solutions to identified product problems
- Record software defects and track them through test lifecycle to resolve.
- Assist operations and support teams to check on issues reported by users.
- Isolate conditions to recreate testing problems and support problem resolution through core product knowledge.
- Review technical documentation to check that it's aligned with product specifications
- Work closely with the Software Development Team and Product Management teams to track QA metrics

Essential Skills & qualifications:

- Bachelor's degree or Master's degree in computer science or telecom engineering (or substantial experience in similar positions)
- Knowledge of administration and configuration of GNU/Linux operating systems..
- Knowledge of automated testing methodologies and tools (UI Testing, Automated Testing, Test Driven Development, etc..)
- Able to write technical specifications in English

As a plus:

- Knowledge of WebRTC, HTML5 and, Javascript
- Knowledge of Docker and virtualized environments (KVM, VirtualBox and VMWare)
