

## Open Position

# DevOps Engineer

### Position: DevOps Engineer

Reference 2019/02/DevOps

### Description

As DevOps Engineer, you will join our Operations team to deploy Sippo, our software solution, into our customer networks using all the components of the technology stack shown in the picture below. You'll need to feel comfortable with these solutions in order to make our software run smoothly, safely and in a highly scalable way.

**After one month with us**, you will have to be able to deploy a basic instance of Sippo in our lab and get familiar with its architecture and deployment scheme. **After three months**, you will understand all the set of Sippo SDKs and APIs, you'll be able to deploy your very basic first Sippo application, will understand how to read and understand Sippo logs, raise feature requests to our development team and you might also spot a couple of bugs. **After six months**, you will be ready to participate in a real project with our customers, deploying all the required elements and providing support during the project launch. You'll be also talking frequently to our technical director to propose architectural changes, new technologies to try, etc...

Besides having experience in DevOps technologies, we'll love to hear that you have experience working in telco and/or contact-center environments and also with critical-mission networks, but this is not mandatory.

A good level of English is mandatory because our customers are global, and you'll need to talk to them on a daily basis.

### Job location:

Vigo, Spain. Remote-job candidates can be considered for this position.

### Date published:

February 2019
