

[Re] Trust in Telecommunications

Principles for restoring trust in the global voice ecosystem.

I

CRISIS OF THE CHANNEL

- 01 The problem isn't the phone. It's the doubt.

II

WHO IS SPEAKING TO ME?

- 02 Identity must be verifiable.
- 03 Reputation is the network's social memory.

III

DO YOU HAVE THE RIGHT TO INTERRUPT ME?

- 04 Legitimacy precedes the right to interrupt.
- 05 Consent transforms interruption into conversation.

IV

IS THIS CONVERSATION POSSIBLE?

- 06 Technical presence is not human availability.
- 07 Human conversation requires clarity guaranteed by the network.
- 08 The expectation of confidentiality must survive the technological evolution.

V

TRUST IN INFRASTRUCTURE

- 09 Trust by Design: security must be user-verifiable.
- 10 Voice is universal; its protection must be too.

**Trust cannot be a product added to telephony.
It must become a native property of the network.**
